Abstract of JP 9244475 (A)

PROBLEM TO BE SOLVED: To obtain an excellent output image in a save mode for saving the image forming material such as the toner and ink.

SOLUTION: At the time of converting gradation of the input image in the gradation converting part, the conversion is executed by applying a conversion table 601 for a normal mode in the normal mode, and the conversion is executed by applying the conversion table 602 for the saving mode in the saving mode. A conversion rule based on the conversion table 602 controls so that the maximum density level after conversion is made lower than the maximum density level expressible by the image output part (printer engine), and the density level of the input image is proportioned to that of the output image. Therefore, differential of the input image can be maintained even in the save mode.
